                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         O157:H7 and genomic comparison with a laboratory strain K-12.";
DNA Res. 8:11-22(2001).
-!- FUNCTION: Activates the carboxylate group of 2,3-dihydroxy-benzoate (2,3-DHB), via ATP-dependent PPi exchange reactions, to the acyladenylate. Then, catalyzes the acylation of holo-entB with 2,3-DHB adenylate, preparing that molecule for amide bond formation with L-serine (By similarity).
-!- CATALYTIC ACTIVITY: ATP + 2,3-dihydroxybenzoate = diphosphate + (2,3-dihydroxybenzoyl)-adenylate.
-!- CATALYTIC ACTIVITY: (2,3-dihydroxybenzoyl)-adenylate + holo-entB = adenosine 5'-monophosphate + acyl-holo-entB.
-!- PATHWAY: Siderophore biosynthesis; enterobactin biosynthesis.
-!- PATHWAY: Siderophore biosynthesis; enterobactin biosynthesis.
-!- SIDBUNIT: Proteins entB, entD, entE, and entF form a multienzyme complex called enterobactin synthetase (By similarity).
-!- SIMILARITY: Belongs to the ATP-dependent AMP-binding enzyme family. EntE subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright.                                                           Gehring A.M., Bradley K.A., Walsh C.T.;

"Enterobactin biosynthesis in Escherichia coli: isochorismate lyas (EntB) is a bifunctional enzyme that is phosphopantetheinylated by EntD and then acylated by EntE using ATP and 2,3-dihydroxybenzoate Biochemistry 36:8495-8503(1997).

-I-FUNCTION: Activates the carboxylate group of 2,3-dihydroxybenzoate (2,3-DHB), via ATP-dependent PPI exchange reactions, the acyladenylate. Then, catalyzes the acylation of holo-entB 2,3-DHB adenylate, preparing that molecule for amide bond formation with L-serine.

-I-CATALYTIC ACTIVITY: ATP + 2,3-dihydroxybenzoate = diphosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Enterobactin synthetase component E (Enterocheli [Includes: 2,3-dihydroxybenzoate-Amp ligase (EC (Dihydroxybenzoate acid-activating enzyme); S-dihydroxybenzoyltransferase (EC 2.3.1.-)].

PATHWAY: Siderophore biosynthesis; enterobactin biosynthesis.
SUBUNIT: Proteins entB, entD, entB, and entF form a multienzyncomplex called enterobactin synthetase.
SIMILARITY: Belongs to the ATP-dependent AMP-binding enzyme family. EntE subfamily.

FUNCTION: Specifically dimethylates two adjacent adenosines FUNCTION: Specifically dimethylates two adjacent adenosines loop of a conserved hairpin near the 3'end of 16S rRNA in the particle. Its inactivation leads to kasugamycin resistance (similarity).

SIMILARITY: Belongs to the rRNA adenine N-6-methyltransferas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    family. KsgA subfamily.
